The idea of creating a blockchain.

Crypto Emergency BlockChain is a product developed based on Ethereum Blockchain. The idea for the technology was formed after the need to implement interconnected products that are part of a single company ecosystem, as well as the possibility of creating its own independent blockchain, not tied to other technological solutions and infrastructure. This will allow us to scale our own infrastructure and take us to a deeper level, as well as accelerate the overall development front of the entire Crypto Emergency ecosystem. Our blockchain will also be used in other products of our company. Also, other startups (companies) from any industry will be able to use Crypto Emergency's blockchain infrastructure.

At the moment, blockchain is already in use at the main Crypto Emergency project:

CEM Coin will be integrated into the platform and will be used as a social token. Token holders will be able to receive benefits on the platform, giving them the right to vote and affecting the life of the project as a whole.

Tokenized question and answer platform for beginners and professionals, will give the opportunity to raise your own level of knowledge or earn your first cryptocurrency;

A crypto-university integrated with government training programs to train in-demand personnel in the economic sector;

The idea of creating a blockchain.

Programs to support startups, from obtaining funding to accompanying projects through their lifecycle. With the possibility of deeper integration into the Crypto Emergency ecosystem and issuing smart contracts (tokens) on our blockchain;

All-in-one set of tools with community-designed light interfaces to solve daily tasks of a wide range of users (wallet, exchange, depository, trust listing, SWAP);

News detector that analyzes them using our own software developments to determine the veracity of materials and their actual impact on the cryptocurrency industry. News released by Crypto Emergency or our partners will be recorded in the blockchain, thereby eliminating the possibility of manipulation of the cryptocurrency market;

Cross-platform advertising and traffic generation tools with a high percentage of conversion, both through our own solutions and with the expansion of the advertising network by partners.

Our specialists are focused on constant analysis of trends in crypto communities and aim to combine both existing solutions and development of new ones, to popularize cryptocurrency among all groups of people in different countries of the world, and to unite crypto enthusiasts on one global platform.

Blockchain architecture

When developing our own BlockChain, it was decided to take Ethereum Blockchain as a basis. This choice was not made by chance, it managed to prove itself for a long time of its existence, both technically and by its popularity among other developers. Many other projects developed on it have been recognized as successful technological and financial tools.

The main advantages of our blockchain, are the following points:

- Minimal fees, less than on Binance Smart Chain;
- Confirmation of transaction blocks in 3 seconds;
- The platform supports easy issuance of smart contracts (your own tokens);
- The possibility of issuing NFTs;
- Projects (startups) that issued smart contracts (tokens) on our blockchain will be able to use our SWAP - cemSWAP.com and get full support from our side;
- Crypto Emergency's blockchain can be used in a variety of economic sectors, from virtual assets to the real sector, such as large manufacturing or small businesses, including transnational transfers anywhere on the planet in 3 seconds;

Development stages

Stages of development of Crypto Emergency BlockChain divided into 4 main stages:

- A detailed review of other BlockChains and identifying the positive and negative parameters in relation to our needs and goals.
- Selection of optimal configurations for the full operation of our products, as well as convenient use in the future, not only by ordinary users, but also by companies. For example, the reduction of transaction confirmation time, that is 3 seconds and is less than on Ethereum BlockChain, which meets our needs to a greater extent.
- Making changes to the program code, according to the selected configurations, as well as integrating the ability to validate the block with validators using POA consensus.
- We compiled cross-platform technical software. We started verifying performance in test mode to identify bugs, errors, flaws, and vulnerabilities. We engaged a team of testers for accelerated testing.

Road Map

Second quarter of 2022:

- Crypto Emergency blockchain launch with smart-contract release capability.
- Network Status launch.
- CEM browser launch.*

Third quarter of 2022:

- Creation of a cryptocurrency wallet in the format of a browser extension, with support for tokens: CEM, ETH, BNB.
- Creation of a cryptocurrency wallet in the format of a mobile application.

Fourth quarter of 2022:

- CEM SWAP platform creation.

First - Second quarter of 2023:

- NFT platform launch on the CEM blockchain.

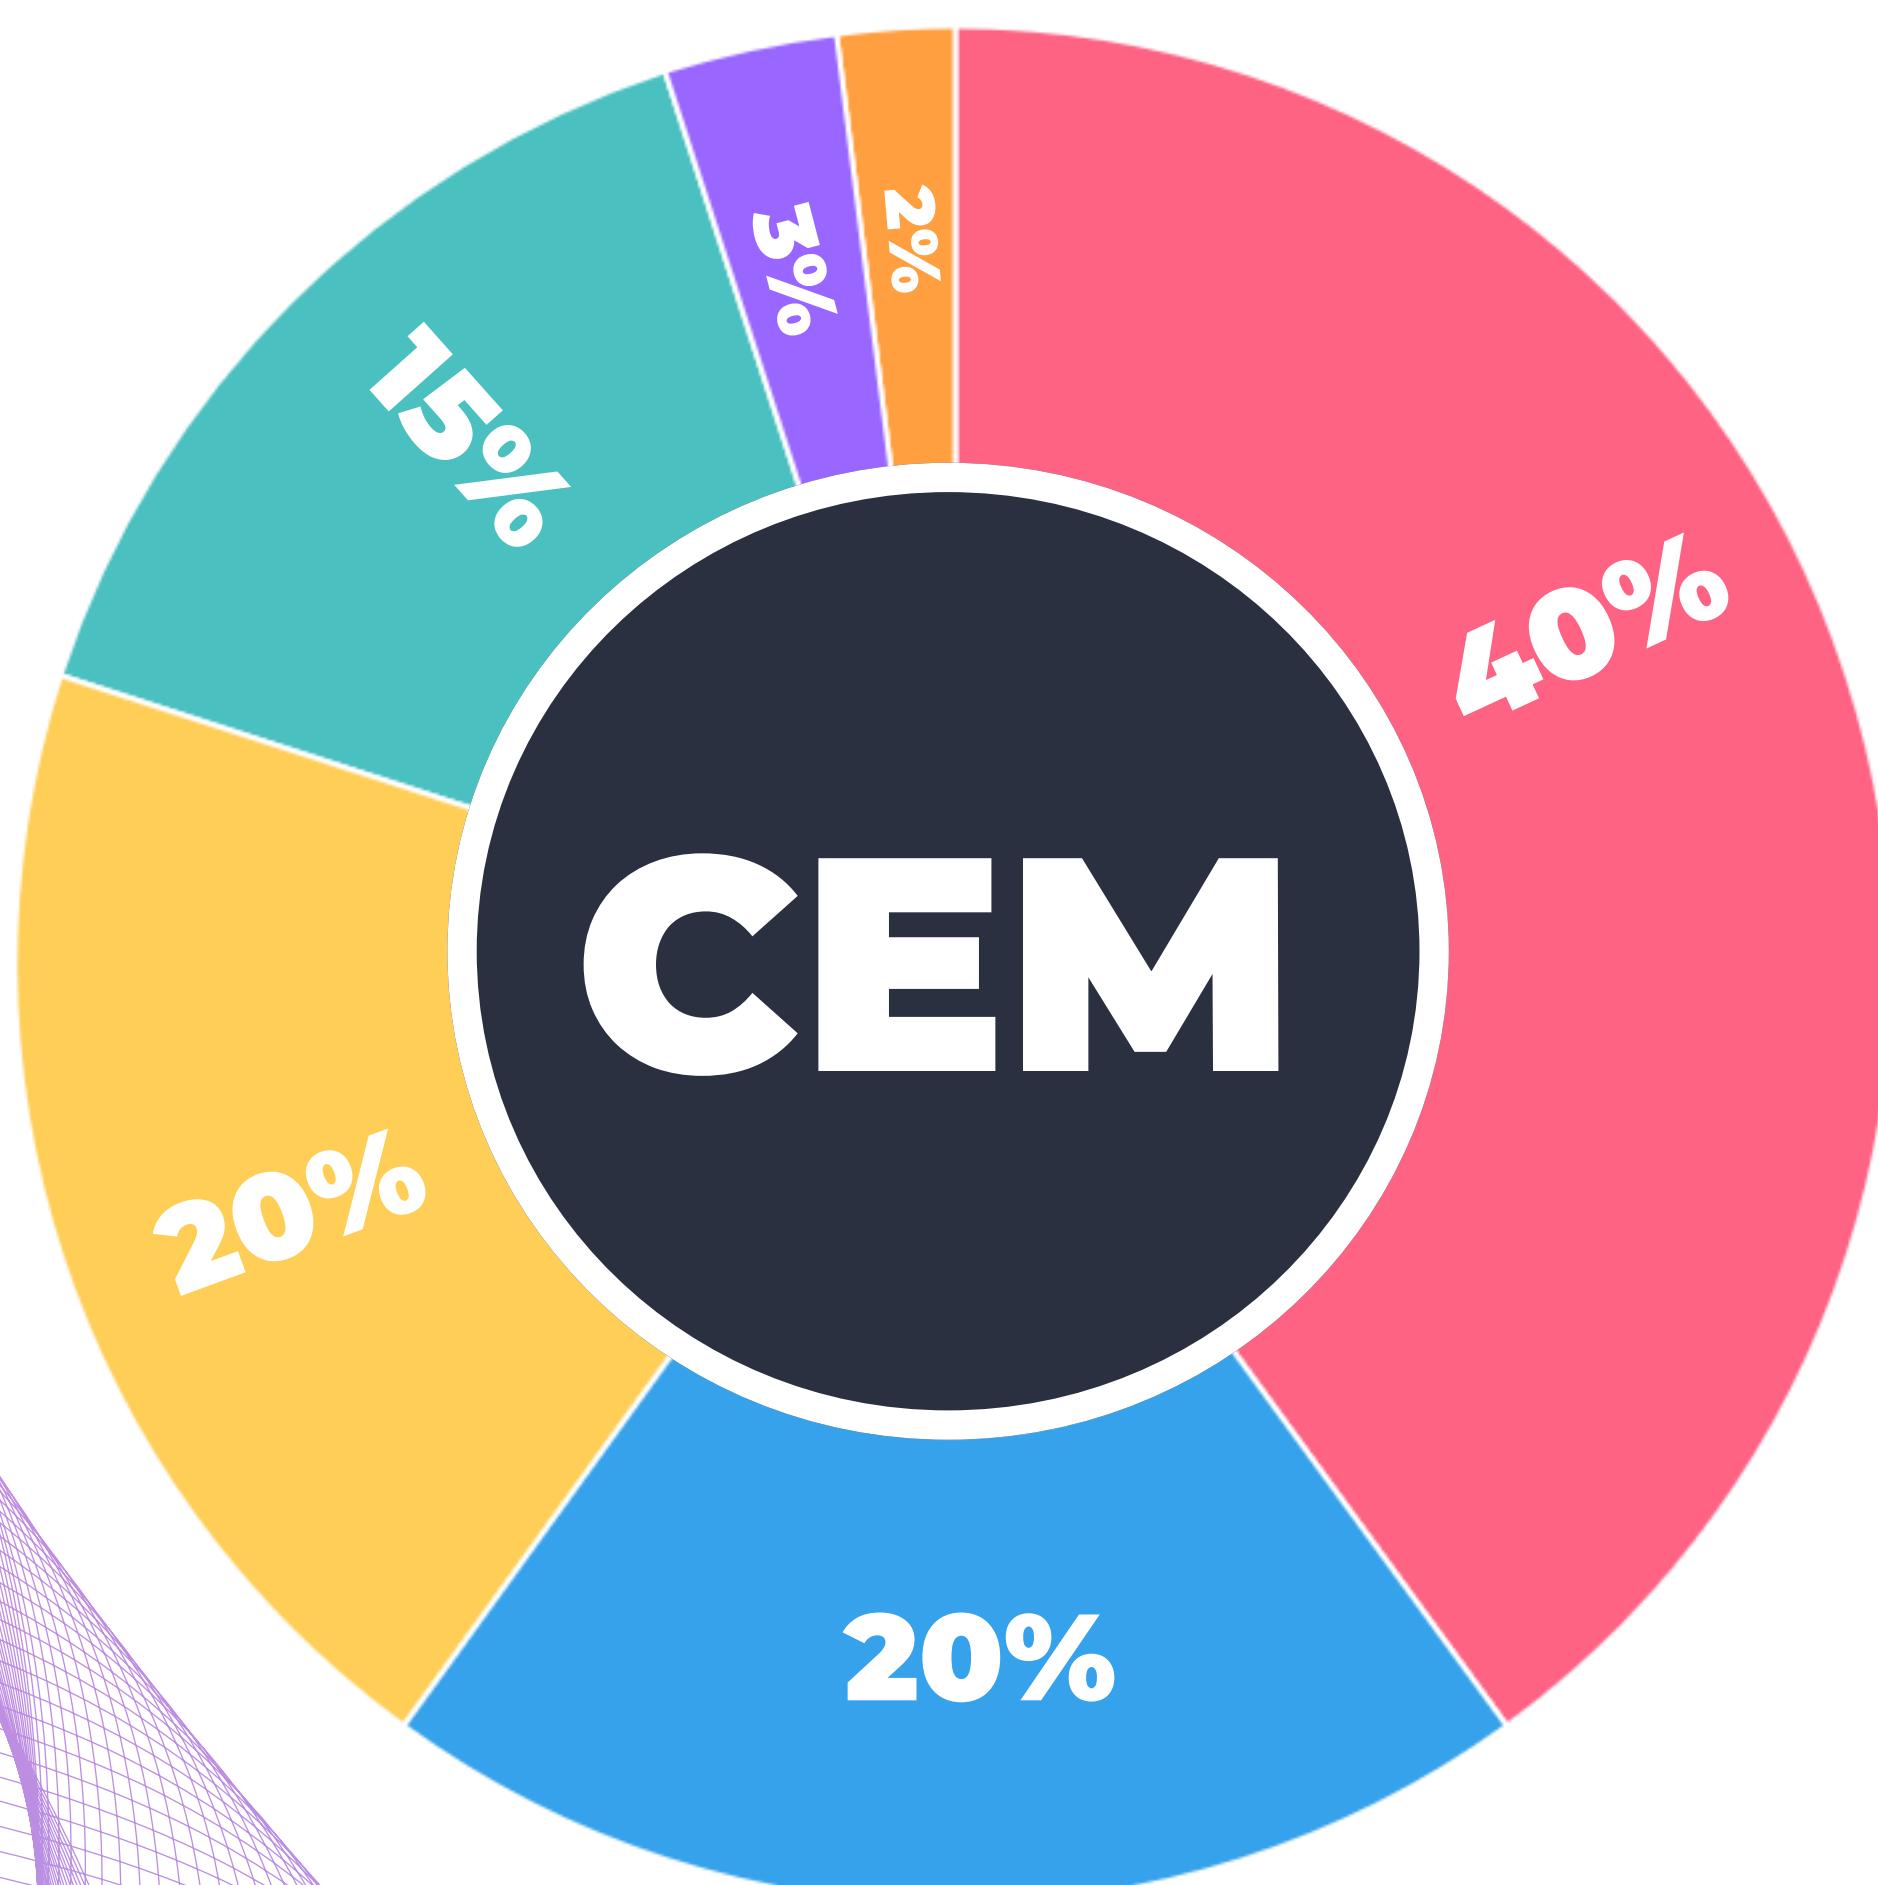

Third - Fourth quarter of 2023:

- Our own exchange launch.
